# Feature List

Home page :

The presentation text will be generated dynamically by the database.

Project page:

The images will be generated dynamically by the database.

Contact page

At the click of the button of sending of mail it executes an SQL request which sends the data of the fields in the database and checks that the fields are well filled.  
If the verification is conclusive the mail will be sent in the recipient's mailbox.

Login page:

At the click of the button of connection it returns towards a controller which will carry out the verification.  
If the verification is conclusive we will be redirected to the administration page.
